

# International Forum on QUALITY & SAFETY in HEALTHCARE

The Improvement Science Symposium at the International Forum on Quality and Safety in Healthcare brings together researchers and healthcare professionals to discuss how the latest innovations in improvement methodology can be used to transform outcomes for patients.

The 2023 Science Symposium moved from a full day event, to an integrated stream within the programme at the International Forum on Quality and Safety in Healthcare in Copenhagen running on 16-17 May 2023. The program highlighted four themes that complement the overall theme for the International Forum on Quality & Safety in Healthcare 'Adapting to a changing world: equity, sustainability and wellbeing for all': **the science of workforce and patient safety, the state of improvement science and the science of delivering equity and sustainability.**

The programme featured landmark research from leaders in the field, examples of successful projects from across the globe, and practical discussions on how to test and scale new ideas in practice.
