

Supplementary Figure 4: The linear regression used to generate a cumulative supply equation for amoxicillin and co-amoxiclav prescriptions ($r = 0.999$, $p < 0.005$) in clusters with pharmacies piloting the Sore Throat Test and Treat (STTT) service, with data from October 2016. The graph includes predicted and actual prescriptions for broad spectrum antibiotics pre- (months 1 to 25) and post- (months 26 to 30) STTT intervention
